

SCRIPT

Good morning/afternoon, everyone! Today, I will present our SPA Section website na ginawa ko using HTML, CSS, JavaScript, and some tools like Bootstrap for design. This website is for our Special Program in the Arts or SPA, where we showcase our majors like music, dance, and more. Simple lang po ito, pero functional and maganda tingnan. Let's start!

Una, let's talk about the overall structure. The website has three main pages: Home (index.html), About (about.html), and Contacts (contact.html). Ginamit ko ang Bootstrap for responsive design, meaning maganda siya sa phone, tablet, or computer. May animations din from Animate.css para mas lively, and Feather icons for small designs like phone or map pins. The CSS is in style.css, and shared JS in script.js for smooth scrolling and card effects.

Now, the Navbar. Ito yung top bar na fixed, so kahit mag-scroll ka, nandiyan pa rin. Ginawa ko ito as a custom component in navbar.js using Web Components – parang reusable part. Sa desktop, makikita mo ang logo ng school (images/school logo.png) sa left, with text "Nicolas L. Galvez MINHS - Laguna", then links: Home, About, Contacts. Sa mobile (below 768px), may hamburger menu – three white lines button na lumalabas. Kapag pinindot mo, bubukas ang menu with purple background (#6f42c1). Simple ang code: JS addEventListener to toggle 'open' class. Hover effects: underline na lumalabas kapag hover sa links.

Next, the Home page (index.html). Ito yung landing page. May hero section sa top – malaking background image (images/home bg.jpg) with dark overlay for text visibility. Text: "Special Program in the Arts" with subtitle and button na "Explore Majors" na nag-scroll down sa majors section. Sa ilalim, may cards for each SPA major: Music, Dance, Visual Arts, Theatre, Media Arts, Creative Writing. Each card has image (like images/spa music.jpeg), title, and short description. Kapag hover, may pulse animation. Kapag click, pupunta sa About page specific section. Simple JS sa script.js para sa hover at click.

Then, the About page (about.html). Dito detailed ang school info. Top section: Text about the school on left, school building image (images/school bg.jpg) on right, with fade-in animations. Sa ilalim, sections for each major like Music, Dance, etc. Each has image (e.g., images/music.jpg) and description with bullets. Alternating layout para maganda – image left then right. May IntersectionObserver JS para mag-fade-in kapag scroll ka pababa. Parang magic, lumalabas ang content kapag nakikita mo na.

Now, the Contacts page (contact.html). Ito for faculty. Big title "SPA FACULTY" with fade-in. Cards for each teacher: image (e.g., images/faculty/MusicT.jfif), name, and major. Arranged in grid – 1-2 per row on mobile, more on desktop. May animations na fade-in-up with delay para sequential. Simple pero clean, using Bootstrap cards with shadows.

Lastly, the Footer. Custom component in footer.js, same as navbar. Blue background (#020037ff), with three sections: About Us (short description), Contact Info (address and phone with icons), and Facebook link with icon (images/fb icon.png). Sa bottom, copyright with current year from JS. Responsive – stacks on mobile.

Overall, the site uses custom elements for navbar and footer, so madaling i-reuse sa all pages. Shared CSS for colors (primary #9595a6), and JS for interactions. No complicated backend, pure front-end. This website helps promote our SPA program – madali mag-navigate, maganda sa mata, and informative.

SUMMARY OF TERMS

HTML (HyperText Markup Language)

Ano ito? – Parang skeleton ng website. Ginagamit para gumawa ng structure tulad ng headings, paragraphs, images, buttons, at links.

Paano gumagana? – Gumagamit ng tags like `<h1>`, `<p>`, `<img>`, `<a>`.

Purpose: Magbigay ng content at layout na makikita ng user.

Halimbawa: `<h1>About Our School</h1>` → malaking title.

CSS (Cascading Style Sheets)

Ano ito? – Parang makeup at damit ng website. Ginagamit para maganda, colorful, at maayos ang itsura.

Paano gumagana? – Binabago ang colors, fonts, sizes, spacing, animations.

Purpose: Gawing maganda at consistent ang design sa lahat ng page.

Halimbawa: `color: white;` → puti ang text. `background-color: #020037ff;` → dark blue ang background.

Bootstrap

Ano ito? – Isang ready-made CSS framework na may pre-designed components (buttons, cards, grids).

Paano gumagana? – Gamit ang classes tulad ng container, row, col-md-4.

Purpose: Gawing responsive (maganda sa phone, tablet, PC) at mabilis gumawa ng layout.

Halimbawa: `col-md-4` → 3 columns sa desktop, 1 column sa mobile.

JavaScript (JS)

Ano ito? – Parang utak ng website. Ginagamit para sa interactions at animations.

Paano gumagana? – Nagdadagdag ng click, hover, scroll effects.

Purpose: Gawing buhay at interactive ang site.

Halimbawa:

`addEventListener('click')` → kapag pinindot, may mangyayari.

`classList.toggle('open')` → bukas/sara ang mobile menu.

Web Components (Custom Elements)

Ano ito? – Parang LEGO blocks na pwede gamitin ulit.

Paano gumagana? – Ginawa namin ang `<custom-navbar>` at `<custom-footer>` sa `navbar.js` at `footer.js`.

Purpose: I-reuse ang navbar at footer sa lahat ng page nang hindi copy-paste.

Halimbawa: `<custom-navbar></custom-navbar>` → automatic na lalabas ang menu.

Feather Icons

Ano ito? – Maliit na SVG icons (phone, map, menu).

Paano gumagana? – Gamit ang `<i data-feather="menu"></i>` + `feather.replace()` sa JS.

Purpose: Gawing maganda at professional ang icons nang hindi gumamit ng maraming images.

Animate.css

Ano ito? – Library ng ready-made animations (fade, slide, bounce).

Paano gumagana? – Add class like `animate__fadeIn`, `animate__pulse`.

Purpose: Gawing mas lively ang entrance ng content kapag nag-scroll.

Responsive Design

Ano ito? – Ang website uma-adjust depende sa screen size.

Paano gumagana? – Gamit ang media queries (`@media (max-width: 768px)`) at Bootstrap grid.

Purpose: Maganda sa lahat ng device – phone, tablet, laptop.

GitHub Pages

Ano ito? – Free hosting para sa static websites.

Paano gumagana? – I-upload ang files sa GitHub → automatic na may live link.

Purpose: Gawing public at accessible ang website sa buong mundo.

Link namin: <https://gweb-site.github.io/NLGM-INHS>

Intersection Observer (JS)

Ano ito? – Parang security camera na nag-aabang kapag lumabas ang content sa screen.

Paano gumagana? – Kapag nakita na, magdadagdag ng animation.

Purpose: Gawing smooth at magical ang paglabas ng sections (like faculty cards).

Shadow DOM

Ano ito? – Parang private room sa loob ng custom element.

Paano gumagana? – Ginagamit sa `this.attachShadow({ mode: 'open' })`.

Purpose: Hindi makakaapekto ang labas na CSS sa loob ng navbar/footer.

Hover & Click Effects

Ano ito? – Mga interactions kapag hinover o kinlick.

Paano gumagana? – Gamit ang :hover sa CSS at addEventListener sa JS.

Purpose: Gawing engaging at madaling gamitin.

Term	Parang Ano?	Purpose	
HTML	Skeleton	Structure	
CSS	Makeup	Design	
Bootstrap	Template	Responsive + Fast	
JavaScript	Utak	Interactions	
Web Components	LEGO	Reusable parts	
GitHub Pages	Bahay	Hosting	
Animations	Magic	Liveliness
